

WEST ESSEX HEALTH INEQUALITIES PROGRAMME

# LIVING SMART HOMES

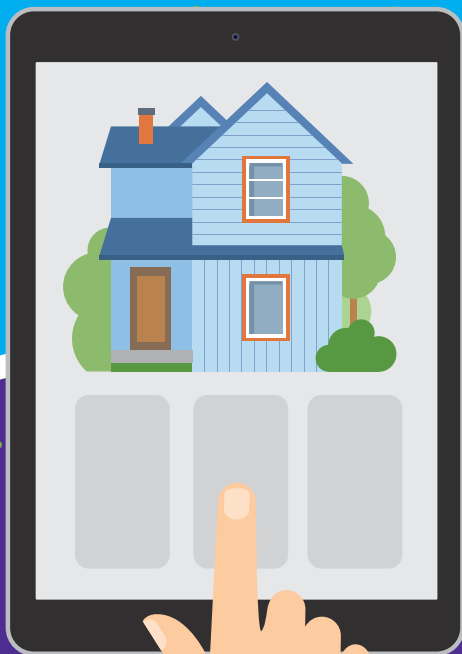

A project to help vulnerable adults living with Health Inequalities in West Essex (Uttlesford, Harlow and Epping Forest) to support them to maintain their independence and to live and connect better in their own homes by equipping their households with a range of digital technology.

## WEST ESSEX HEALTH INEQUALITIES PROGRAMME

# LIVING SMART HOMES

**This Essex County Council Covid Recovery (COMF) funded project is delivered through the West Essex Health Inequalities Group. We are equipping a number of occupied homes/showcase venues with the latest digital technology to be able to demonstrate and exhibit how easily such technology can be deployed to support those falling into this cohort.**

**This will vary depending on their needs but could include:**

- Smart speakers, plugs & bulbs
- Hydration device
- Cupboard & freezer sensors
- Camera speaker systems
- Room temperature sensors
- Video doorbells
- Memory tile devices
- Security sensors
- Wearable devices

**As part of this project, we have householders permission to invite people to their homes for an opportunity to experience and see digital technology being used in real life situations.**

In addition, we will invite people to our digital showcase centres to experience this digital technology and learn more about its potential, impact and how simple it is to deploy and use.

If you are a professional/commissioner/carer/relative or other interested party who might benefit from a visit to one of these homes/showrooms, you can arrange this by contacting the Project Coordinator on the relevant number or email overleaf.
